

Connecting Car and Driver

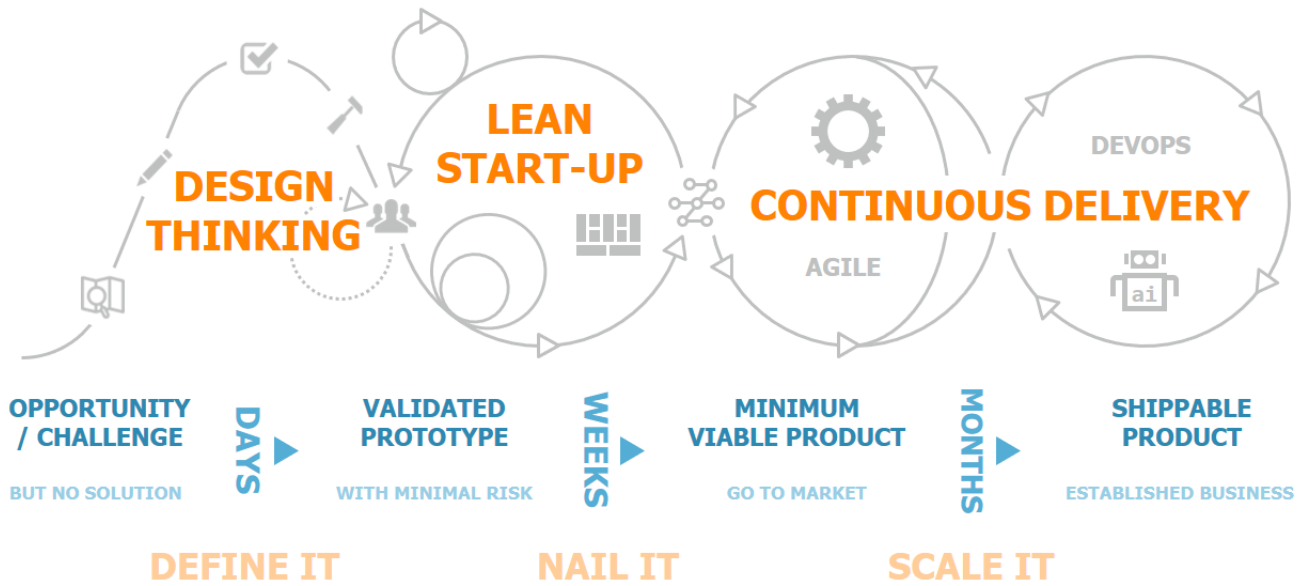

We help clients create experiences to better connect car and driver. We collaborate with clients through our idea-to-market development process, and leverage years of experience within the consumer electronics and automotive industries.

This process gives our clients significant time to market advantage, and elevates the car and driver experience through innovative connectivity and value-driven performance. Define your product features, end-user benefits, and create a user experience that is unique and unmatched.

We've worked with many common HMI system components and platforms like Windows Automotive, Apple Car Play, QNX, Linux and Android Auto, and have a proven track record for creating high performance solutions for IVI systems, Driver Assistance Systems and Telematics platforms.

FROM INNOVATION TO DELIVERY

Who We Help

As a global partner, we help some of the world's largest and most diverse companies create Connected Car solutions. Clients like Nissan, Volvo and more, partner with us to create technologies that revolutionize how we live and communicate with each other.
