

Symbio Smart TestOps

Software Development Quality Management Dashboard

Easy Quality Management with Automation

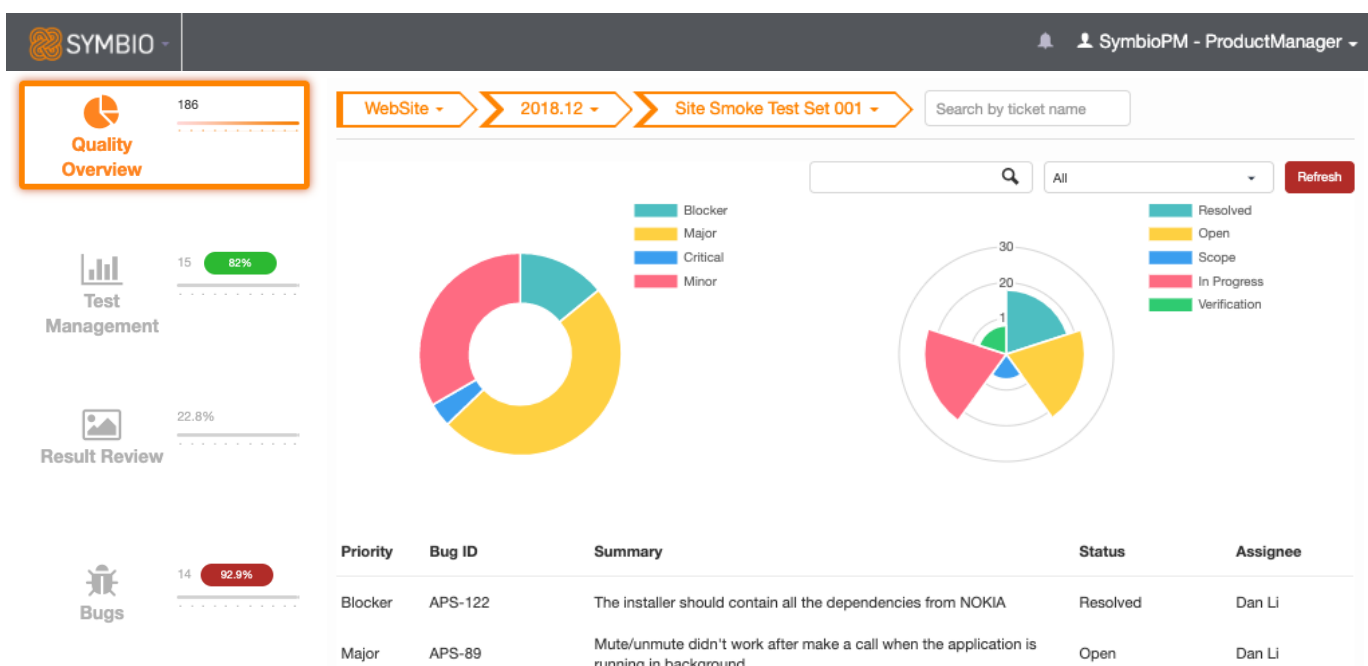

Symbio Quality Management Dashboard is an application that provides a centralized location for you to oversee the quality status and manage the testing activities of your product.

Integrated with a mature automation solution that makes testing more efficient and shortens the time necessary to release your product.

Offering a customizable interface that allows you to easily interact with other systems for test case management and bug tracking.

Highlights

- Quality Overview: clear high level graphs and charts of your product' s quality status at any point in time. Pass rates, failure rates, issues found, etc.
- Test Management: plan your releases, define test activities and easily trigger automated test runs
- Result Review: results are stored for as long as you want to and you' ll be able to view every execution result of your test sets, releases and products. Screenshots and executions are recorded for review and potentially report, investigate or analyze any issue.
- Bug: reporting and tracking issues is facilitated with an integration with Jira and other bug tracking tools
- Security: SSO/LDAP integration to simplify user authentication and secure your information

Benefits

Visibility – Enhance quality management and information sharing within your organization and across teams

Efficiency – Significantly reduce your test execution time with automation support
